

Multi-Market Message Optimization

TURF Analysis | Food Delivery Platform

Case Study | Market Research Strategy

Project Overview

CHALLENGE

Leading food delivery platform needed to optimize marketing message portfolio across 6 international markets with limited budget. Prior campaigns used uniform messaging globally, but performance varied significantly by market.

OBJECTIVE

Identify optimal 5-message portfolio that maximizes unduplicated reach across all markets. Determine which messages should be universal vs. localized by market.

METHODOLOGY

TURF Analysis

n=600 per market (3,600 total)
6 markets: US, UK, AU, IT, FR, SP
12 messages tested
Genetic algorithm optimization

Optimized portfolio reaches 87% vs. 71% with uniform approach (+23% improvement)

87%

Optimized Reach
5-message portfolio

71%

Uniform Reach
Prior approach

+23%

Improvement
Reach efficiency

STRATEGIC RECOMMENDATION

Deploy 3 universal messages (Convenience, Speed, Reliability) + 2 market-specific slots for local optimization.

"Speed" and "Convenience" lead globally, but appeal varies significantly by market

UNIVERSAL WINNERS

- 1 Convenience 72%
- 2 Speed 69%
- 3 Reliability 65%

These 3 messages appear in optimal portfolio for ALL markets

3 universal + 2 localized messages maximizes cross-market reach

OPTIMAL 5-MESSAGE PORTFOLIO BY MARKET

Market	Universal (3)	Localized (2)	Reach	vs Prior
US	Convenience, Speed, Reliability	Selection, Value	89%	+12%
UK	Convenience, Speed, Reliability	Quality, Local Options	86%	+14%
AU	Convenience, Speed, Reliability	Selection, Quality	88%	+11%
IT	Convenience, Speed, Reliability	Value, Local Options	85%	+22%
FR	Convenience, Speed, Reliability	Quality, Sustainability	84%	+19%

KEY INSIGHT: Southern European markets (IT, FR, SP) benefit most from localization—Value messaging is critical

Source: TURF Optimization | Genetic algorithm with 5-message constraint

Diminishing returns beyond 5 messages—additional messages add <3% reach

OPTIMAL POINT

5 Messages

87% reach

INCREMENTAL VALUE

Msg 1-3: +29% reach

Msg 4-5: +16% reach

Msg 6+: <3% reach

Source: TURF Analysis | Incremental reach calculated via simulation

Italy shows highest frequency improvement with localized portfolio (+47%)

Italy	+47%
Spain	+50%
France	+35%
UK	+35%
US	+33%
Australia	+32%

Source: TURF Analysis | Frequency = avg messages resonating per respondent

"Speed" and "Local Options" create strongest competitive separation

LEAD WITH

Speed +19 pts

Highest differentiation

REINFORCE

Local Options +14 pts

Unique strength

TABLE STAKES

Convenience +4 pts

Necessary but not differentiating

AVOID EMPHASIS

Selection -2 pts

Competitors stronger here

Source: Competitive Message Testing | Differentiation = Client appeal minus avg competitor appeal

Recommendations

1

Tiered Portfolio

3 universal messages
(Convenience, Speed,
Reliability) + 2 market-
specific per optimization
table

2

Prioritize Southern Europe

IT, FR, SP require
Value/Local messaging.
Uniform approach
underperforms by 20%+

3

Lead with Speed

Highest competitive
differentiation (+19 pts).
Universal appeal
supports brand
positioning

4

Cap at 5 Messages

Diminishing returns
beyond 5. Budget
constraint is actually
optimal allocation

OUTCOME

Localized campaign achieved 23% higher engagement vs. previous uniform approach

Message Recall	+38%	34% → 47%
----------------	-------------	-----------

Click-Through Rate	+24%	2.1% → 2.6%
--------------------	-------------	-------------

Conversion Rate	+25%	0.8% → 1.0%
-----------------	-------------	-------------

Cost per Acquisition	-19%	\$42 → \$34
----------------------	-------------	-------------

BUSINESS IMPACT

Campaign engagement increased 23% overall.

Southern European markets saw largest improvement (+31%).

Framework adopted for subsequent product launches.

Message testing now standard pre-campaign.
